

SMOKING SHELTER RANGE

Design and Dimensions

The frame is manufactured from mild steel square section and is galvanized after fabrication. The shelter is then powder coated black as standard or if requested can be coated a colour of your choice for a small additional cost.

The domed clear polycarbonate roof gives this shelter its pleasing appearance while allowing maximum light and air circulation. The rear, sides and front panels are infilled with clear 6mm polycarbonate.

Electrical bulkhead lighting for nighttime or dark winter months is also available.

The sloping perch seating adds comfort to your shelter while preventing items being left on the seat. The seat is galvanized and finished to match the shelter. Foot arrangements for surface mounting or grouting into suitable surface insures easy installation.

Legislation

The shelters are 51% uncovered which conforms to the current legislation; the relevant section is listed below

Section 47 Public Health Act

"(d) an outdoor part of a place or premises covered by a fixed or movable roof, provided that not more than 50 per cent of the perimeter of that part is surrounded by one or more walls or similar structures"

Measurements

Single Unit 2150mm X 2150mm

Double Unit 4225mm X 2150mm

Treble Unit 6300mm X 2150mm
